

Did you know that hearing loss is connected to other health conditions?

Heart Disease

The inner ear is extremely sensitive to variations in blood flow

Alzheimer's & Dementia

Untreated hearing loss may accelerate cognitive decline

Diabetes

Hearing loss is twice as common in people with diabetes

Chronic Kidney Disease

Hearing loss is more common in people with moderate CKD

Falling

Every additional 10 decibels of hearing loss increases the chances of falling by 1.4 times

Depression

Feelings of sadness or loneliness are common in people with untreated hearing loss

Mortality

Untreated hearing loss is tied to a greater mortality risk for older adults

Hospitalization

Increased hospitalization rate for seniors with hearing loss
